

Safety and Rescue Training
for high-hazard work activities

**Confined Space
Surface Mines
Excavation
Tower**

Wind Turbine Rescue > Operations

This course teaches students how to perform organized, systematic rescues from wind turbines. These techniques are also applicable to radio, radar, microwave, electrical, transmission, water, and lighting structures.

Participants learn the procedures and systems required for stabilizing and lowering patients and have ample opportunity to use their skills and knowledge in simulated rescue situations.

Because each workplace has its own unique hazards, the scenarios, enactments, and equipment are tailored to each industrial site.

Prerequisites: Before attending this class, students need to have completed lockout/tagout, fall protection, and first aid/CPR.

Course Objectives

Upon successful completion of this course the participants will be able to:

1. Describe how the construction of various towers affects their rescue procedures.
2. Develop and follow a rescue pre-plan.
3. Summarize the use of various types of rescue equipment and systems.
4. Use, store, and maintain their rescue equipment according to manufacturer's requirements.
5. Tie all required knots/hitches.
6. Rig a variety of patient lowering systems.
7. Use all required knowledge and skills in practice rescues and scenario-based drills.

Course Outline

Orientation

- Basic Rescue Processes

Rescue Hazards

- Size-up
- Scene Safety

Rescue Equipment

- Conectors, Pulleys, Ascenders, Descenders
- Specialty Equipment
- Software—Rope and Webbing
- Inspection and Care

Knots and Hitches

Rescue Systems

- Friction Lowering Systems
- Mechanical Advantage Systems

Rescue Procedures

- Pre-Planning
- Rescue Methods and Decision Factors

Practice Rescues
