Telehandler> Train the Trainer — Online Training —

At D2000 Safety our specialty has always been in-person training. We recognize how person-to-person interactions can greatly enhance the effectiveness of training, and we are thankful that our clients share this view. But we also recognize that we need to protect our students and instructors. For this reason, we will be holding our Telehandler Train the Trainer classes on-line for the foreseeable future.

This course is designed to provide experienced telehandler operators with the knowledge, skills, and resources needed to deliver effective initial and refresher training to your employees.

It stresses the practical application of safe operating principles, load characteristics, and workplace hazards.

The curriculum reflects all the training requirements listed in 29 CFR 1910.178.

All students will receive a fully-scripted Leader's Guide, sample student materials, and a variety of checklists and forms needed to train and certify your location's telehandler operators.

Prerequisites

Students must be qualified telehandler operators with experience using the exact type of telehandler that they will be using to train operators.

Course Objectives

When you have completed this course you should be able to:

- List the basic types of material handling equipment in use at your location.
- Identify workplace conditions that relate to telehandler operations and stability.
- Complete a telehandler pre-operation inspection.
- Operate the telehandler in accordance with the manufacturer's requirements.
- Adjust your operation of the telehandler to reflect worksite conditions, attachments, and loads.
- Follow your location's material handling requirements.

Our programs reflect:

ANSI/ASSE Z490.1 *Criteria for Accepted Practices in Safety, Health, and Environmental Training*

Course Outline

Overview of Telehandler Safety

- Causes of Accidents
- Key Safety Rules

Basic Operation

- Pre-shift Inspection
- Pre-planning
- Transmissions and Steering
- Traveling and Inclines

Load Handling

- Loads and Attachments
- Stability
- Load Charts
- Lifting and Tilting
- Transporting Loads
- Suspended Loads
- Unloading, Parking, and Shutdown

Refueling and Recordkeeping

Practical Skills Checklist and Post-test

Conducting Effective Training

- Adult Learning Fundamentals
- Operator Training
- Recordkeeping and Certification
